

The distributed feedback (DFB) laser transmitters provide exceptional performance for linear fiber-optics communications in very wide bandwidth applications. Emcore's linear fiberoptics are an excellent alternative to using coaxial cable systems to transmit 10 MHz to 13 GHz signals. They offer significant improvements in reliability in microwave communication networks by transmitting the RF signal in its original format. As a result of these properties, these microwave DFB laser transmitters provide significant improvements in signal quality for a wide variety of applications, including antenna remoting, timing and reference signal distribution, telemetry, measurement, and delay lines.

Microwave DFB lasers are available in several packaging styles either as a flange-mount for extreme environments or as a plug-in for integration with Emcore's System 10000 rack-mountable chassis and power supplies. Electronics within the flange-mount and plug-in transmitters control the laser temperature and dc bias current and provide warnings whenever the temperature or power deviates from their intended levels, thus providing a self regulating, fully integrated microwave product. These units provide high-quality noise performance in sensitive optical links.

Features

- High dynamic range
- Long distance communications
- 10 MHz to 13 GHz bandwidth
- Built-in optical isolator, 1310 nm
- CE certified

Applications

- Antenna remoting
- Cellular and PCS networks
- Military triband communications
- Tracking, telemetry, and control

Performance Highlights

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

Front Panel LEDs

- Power on
- Laser power stable
- Laser temperature stable

dc Monitor Voltages

- Photodiode current, pin 6
1V/mA $\pm 2\%$ accuracy (into 1 M Ω load)
Proportional to laser output power.
- Laser dc current, pin 8
1V/100mA $\pm 2\%$ accuracy (into 1 M Ω load).

Alarm Circuits

- The alarms are open-collector outputs capable of providing 20mA when active and withstanding 15V when off.
- Low optical power, pin 7
Sinks current when power is below 90% of set-point.
- Laser temperature, pin 9
Sinks current when laser internal temperature exceeds $\pm 2^\circ\text{C}$ of setpoint nominally 25°C .

Laser Safety

Class IIIb Laser Product

FDA/CDRH Class IIIb laser product. All versions are Class IIIb laser products per CDHR 1040 Laser Safety Requirements. All versions are class 3B laser products per IEC 60825-1:1993. The device has been classified with the FDA under accession number 220191.

This product complies with 21 CFR 1040.10 and 1040.11.

Single-mode fiber pigtail

Wavelength = 1310 nm

Maximum power = 50 mW

Because of size constraints, laser safety labeling (including an FDA class IIIb label) is not affixed to the module but attached to the outside of the shipping carton.

Product is not shipped with a power supply.

Caution: Use of controls, adjustments and procedures other than those specified herein may result in hazardous laser radiation exposure.
